Justin Perez

Full Stack Software Engineer

justinprz12@gmail.com · justindavidperez.com · github.com/JustinPerez12 · linkedin.com/in/justindperez

Platform and full-stack engineer who owns systems end to end — federated retrieval in Python, event-driven .NET services, and the OIDC/SSO surface of a multi-tenant SaaS platform. I write the architecture decision record, drive it to consensus, and carry it to production across nine environments.

EXPERIENCE

Software Engineer 2 · NICE — June 2025 — Present

Sandy, UT — Federated retrieval platform · CXone Expert · auth library · conversational-AI integration

- Co-designed and shipped an autonomous AI software engineer (Claude Agent SDK + AWS) that turns tickets into tested, reviewed pull requests for a large production codebase, with sandboxed execution, cost-aware model routing, and human-in-the-loop controls.
- Architected a federated knowledge-retrieval service in Python from its earliest commits — owning the request/response contract, config-driven provider dispatch, and the unified contract that merges results across providers with reciprocal rank fusion. Authored four architecture decision records and drove them through review to team consensus.
- Own the platform's OIDC/SSO surface: delivered preferred-username through launch, a safe revert under incident, and a hardened re-land; hardened the multi-tenant redirector; and contributed PKCE upstream to an open-source PHP auth library before enabling it by default across the product.
- Led the migration of search analytics from a synchronous, request-blocking query onto an event-driven .NET 8 service on SNS/SQS — KEDA scale-to-zero, dead-letter handling, per-site feature-flag rollout — and authored the Terragrunt, CloudFormation, and Helm infrastructure behind it across nine environments.
- Drove a read-replica adoption program to cut primary-database load: audited ~38 services for eligibility, then moved user, tag, group, and page query paths across 7+ high-traffic tables onto replica reads.

Software Engineer I · Cox Automotive — June 2023 — June 2025

Draper, UT

- Increased security adoption across company software inventory from 10% to over 45% by simplifying the upload process and building more efficient defect-retrieval methods.
- Designed a graph database on NeptuneDB modeling thousands of interconnected entities — vulnerabilities, software components, teams, and users — making security data queryable across the org.
- Built tooling that generates security status reports for more than 7,500 software components.

Software Engineer · Wavetronix — March 2022 — Jan 2023

Salt Lake City, UT

- Developed and maintained a C# / .NET Framework application that simulated traffic patterns, letting engineers design and optimize intersection layouts.
- Built a companion C# tool that processed simulation output into graphed visualizations, making complex traffic data readable at a glance.

PROJECTS

Dynasty Futures · Production trading platform for a futures prop firm — 2026 — Present

dynastyfuturesdyn.com

- Founding engineer on a production trading platform for a futures prop firm, owning every technical decision: live dashboards, equity and P&L curves, a payout eligibility engine, KYC. React/TypeScript, Node/Express, Prisma, Postgres, AWS, Terraform.

Campus Core · Multi-tenant academic advising platform — 2024 — Present

campus-core.com

Huddle Up · Team fantasy football platform — 2023

capstone-cs.eng.utah.edu/fan-huddle

SKILLS

Languages	TypeScript, JavaScript, Python, C#, Go, PHP, Java, C++, SQL
Frontend	React, React Native, Next.js, Tailwind, HTML, CSS
Backend & data	Node.js, Express, .NET, ASP.NET Core, Prisma, PostgreSQL, MySQL, NeptuneDB, Redis, Event-driven architecture, SNS / SQS, Multi-tenancy, OpenTelemetry
Infrastructure	AWS, Azure, Terraform, Terragrunt, Docker, Kubernetes, Helm, KEDA, ECS Fargate, Lambda, GitHub Actions
Security	OIDC / SSO, OAuth2 / PKCE, JWT, Veracode, Wiz, Aqua, SAST / SCA, Vulnerability management

EDUCATION

B.S. in Computer Science · University of Utah — Salt Lake City, UT · Aug 2019 — May 2023
